

Custom made Timber Pendants

Ailia

AILIA IMPORTS

Our unique timber pendants are manufactured at Tilly's using locally sourced timber, we offer different timber species and colours, each offering a different quality in grain style and colour. All our pendants are 2m long but custom lengths can be discussed with staff. These pendants are low voltage and will require a driver to be located remotely, ideally in the ceiling above the light. (Please note the driver needs to remain accessible for any future maintenance).

White Washed (Vic Ash)
32mm x 65mm*
May feature some gum lines

Lighting Solutions

Product: Custom made Timber Pendants

AILIA IMPORTS

Our Timber pendants are low voltage, requiring the use of a driver (transformer). This driver must be located in the ceiling space above the light (as pictured). The driver can be located up to 5metres away if ceiling space is limited. Concrete ceiling will cause a problem with driver location. Discuss your options with our staff and your electrician.

Tip: When screwing this adapter onto the ceiling, the power cable can tend to get twisted. It can be handy to back twist the adapter and cable a few turns before attaching to the ceiling. This way the power cable will untwist as it is screwed to the ceiling.
